

MEDTOX LABORATORIES LEAD DUST WIPE TESTING

Newer research into lead exposure is clearly showing that there is no "safe" level for blood lead levels in children. In an effort to better protect our children, primary prevention is rapidly becoming an area of focus for many health departments and childhood lead poisoning prevention programs. With lead dust in homes being the primary source of lead exposure in children, lead dust wipe testing has become the standard for identifying lead hazards. We at MEDTOX are very excited about being able to contribute to these efforts in addition to the filter paper blood lead screening we have offered for years.

MEDTOX Testing Features:

- ◆ AIHA Certified
- ◆ ICP/MS Analysis, the next generation in metal testing
- ◆ Customizable Supply Packaging
- ◆ Illustrated Collection Instructions
- ◆ Convenient pre-paid postage
- ◆ Electronic Results Reporting
- ◆ Accurate, Meaningful Results
- ◆ Disposable Templates Provided
- ◆ Low Cost
- ◆ Superior Service
